

LIFEBREATH and Rawlings Homes

Another important fact is that central air conditioning can be added to a CAF system in the same way as it can be added to any forced air system, allowing for whole-house heating, cooling and ventilation. The LIFEBREATH TFP Air Cleaner is added to achieve complete climate and air quality control in a single system. "Start preparing now for the millennium home in your area", states Paul Rawlings of Rawlings Homes "It is the way of the future - an intelligent choice".

Rawlings Homes has been building premium quality, custom-designed homes in southwestern Ontario for over ten years.

After opening the first ICF-built (insulating concrete form) home at the new Neighbourhoods of Meadow Creek in Ilderton, Ontario, Rawlings Homes have won many awards. First, they were awarded two National CHBA Awards for "new home under 1500 square feet" and "new home 1500-2200 square feet", during the Canadian Home Builders' Association conference in February. The new home categories recognize excellence in the use of innovative technology and construction techniques, curb appeal and overall value. Lastly, they were recognized by CMHC as a homebuilder that builds healthy homes for Canadians, as evident in "The Millennium Home".

The Rawlings' High Performance Millennium Home is the way of the future with innovative and state-of-the art technologies in today's market including the LIFEBREATH Clean Air Furnace and the LIFEBREATH TFP Air

cleaner. The home, an EnviroHome project, features some of the most advanced building technologies and products including acast-in-place concrete forming system. This home also incorporates the use of recycled and environmentally friendly materials making the structure "good for you, your community and the environment". Also, as an EnviroHome project, it exceeds the R2000 standard.

The high performance systems have been integrated into this house to ensure good air quality, a high level of indoor comfort year round and exceptional energy efficiency. This home includes two kinds of heating systems: in floor heating and the LIFEBREATH Clean Air Furnace. The CAF, installed by Design Heating Systems Inc. and obtained through Arda Distributing both of London, Ontario, includes a built-in LIFEBREATH Heat Recovery Ventilator for the continuous replacement of stale air with fresh air.
